Kode Program

```
14 class RegisterActivity : AppCompatActivity() {
15     3 Usages
16     private lateinit var auth: FirebaseAuth
17
18     override fun onCreate(savedInstanceState: Bundle?) {
19         super.onCreate(savedInstanceState)
20         setContentView(R.layout.activity_register)
21
22         auth = FirebaseAuth.getInstance()
23
24         val etUsername = findViewById<EditText>(< id = R.id.etUsername)
25         val etEmail = findViewById<EditText>(< id = R.id.etEmail)
26         val etPassword = findViewById<EditText>(< id = R.id.etPassword)
27         val etConfirmPassword = findViewById<EditText>(< id = R.id.etConfirmPassword)
28         val btnRegister = findViewById<Button>(< id = R.id.btnRegister)
29
30         val tvLogin = findViewById<TextView>(< id = R.id.tvLogin)
31
32         tvLogin.setOnClickListener {
33             val intent = Intent( packageContext = this, < cls = LoginActivity::class.java)
34             startActivity(intent)
35         }
36
37         btnRegister.setOnClickListener {
38             val username = etUsername.text.toString()
39             val email = etEmail.text.toString().trim()
40             val password = etPassword.text.toString().trim()
41             val confirmPassword = etConfirmPassword.text.toString().trim()
42
43             if (username.isEmpty()) {
44
45
```

Pada tahap pertama dilakukan pengembangan fitur registrasi pengguna menggunakan Firebase Authentication. Fitur ini memungkinkan pengguna membuat akun baru menggunakan username, email, dan password.

Implementasi Firebase Authentication

The screenshot shows the 'Users' page in the Firebase Authentication console. At the top, there is a search bar with the placeholder text 'Search by email address, phone number, or user UID', an 'Add user' button, and refresh and menu icons. Below the search bar is a table with five columns: 'Identifier', 'Providers', 'Created', 'Signed In', and 'User UID'. The table contains five rows of user data. At the bottom right, there is a pagination control showing 'Rows per page: 50' and '1 - 5 of 5'.

Identifier	Providers	Created ↓	Signed In	User UID

Rows per page: 50 1 - 5 of 5 < >

Fitur registrasi pada aplikasi Comments diimplementasikan menggunakan Firebase Authentication dengan metode email dan password. Pengguna diwajibkan mengisi username, email, password, dan konfirmasi password sebelum membuat akun.

Setelah data berhasil divalidasi, sistem membuat akun baru menggunakan method `createUserWithEmailAndPassword()`. Selanjutnya username pengguna disimpan pada field Display Name menggunakan `UserProfileChangeRequest`. Setelah proses registrasi berhasil, pengguna diarahkan ke halaman Login untuk melakukan autentikasi menggunakan akun yang telah dibuat.
